

SENIOR JAVA WEB DEVELOPER

Position Summary:

DotLoop is looking to immediately hire Senior Java Web Developers to join their growing Engineering organization. This is an outstanding opportunity for experienced web application developers to join a fun, creative, and challenging environment. DotLoop is the leading provider of simple, paperless Real Estate solutions that takes a complex process and makes it simple. Real Estate agents, brokers, buyers, and sellers are using DotLoop to save time, money and hassle. DotLoop's system is used across the country to facilitate more convenient and efficient transactions, to provide better information to the brokers and their agents and generally provide a better process for everyone involved.

Our ideal candidate must have solid experience developing large-scale high-traffic web-based applications. We're looking for a self-motivated, innovative problem solver who makes the things happen. Experience is important but equally valuable is the ability to work in a fast paced, dynamic environment to create solutions that meet the company standards and make our users' lives easier. The senior java web developer is expected to always keep site scalability and usability as core tenants. This critical position at DotLoop will be responsible for architecting and implementing key new features, improving the scalability of the product and implementing a mobile version of DotLoop's application.

Position Requirements:

- 7+ years combined experience as a developer, system analyst, architect or development manager
- 5+ years of recent Java web development experience
- 3+ years of experience leading or managing teams of developers
- Strong Java programming and debugging skills
- Strong experience developing web applications and user interfaces with Java technologies, especially JDBC, JSP, Servlets, Struts 2, Tomcat and Apache
- Experience developing with web presentation technologies, especially AJAX, JSON, JavaScript, CSS and understanding of multi-browser compatibility
- History of developing large-scale high performance SaaS based applications, preferably used by the general public
- Experience mentoring junior developers
- Experience as project lead managing all aspects of a project including specification, design, coding, roll-out and support
- Strong written and verbal skills

Preferred candidates would also meet the following criteria:

- Development experience with MySQL, Java based reporting tools, JDBC and XML
- Experience with the Agile development methodology
- Apache, Tomcat, Eclipse, JMeter, and Subversion experience is a plus
- Passionate about web technologies and UI innovations
- Managed small to medium size groups of technical people
- Worked with Product Management to define requirements, write technical specifications and meet release requirements on a timely basis
- Experience with mobile software development and flash development a plus
- Integration and development with social media apps (Facebook, Twitter) a plus
- Bachelor of Science or better in Computer Science, MIS or other computer related degrees
